

User Story - Testcase Generator Assignment

This document presents the implementation and completion of the assignment for the **User Story - Testcase Generator** application. The project includes Jira integration for fetching user stories and automated generation of QA test cases. Additionally, a feature file generation option was added for user stories.

Requirement	Status
Implement Jira Integration (Frontend + Backend)	Completed
Fetch User Stories from Jira	Completed
Generate QA Test Cases from User Stories	Completed
Generate Feature File Option	Completed
UI Enhancements and Story Filtering	Completed

Implemented Features

- Frontend and backend Jira integration implemented.
- Ability to connect to Jira using Base URL, Email, and API Token.
- Fetch individual Jira stories using Issue Key.
- Fetch all stories using custom JQL filters.
- Display fetched stories in the UI for selection.
- Generate positive and negative QA test cases automatically.
- Expandable detailed test steps, expected results, and test data.
- Copy generated test cases as JSON.
- Feature file generation option added for user stories.
- Improved UI/UX with clean workflow and onboarding.

Tech Stack

Frontend: Vite + Vanilla TypeScript + Tailwind CSS
Backend: Node.js + TypeScript
LLM Model: Groq API using llama-3.1-8b-instant
Integration: Jira REST API

Details ▴

Parent enters valid child details

App recommends starter routines based on needs

Steps

S01 Launch the app and navigate to the onboarding screen

S02 Click the 'Create Routine' button

S03 Enter valid child details (name, age, condition, goals)

S04 Verify that the app recommends starter routines based on needs

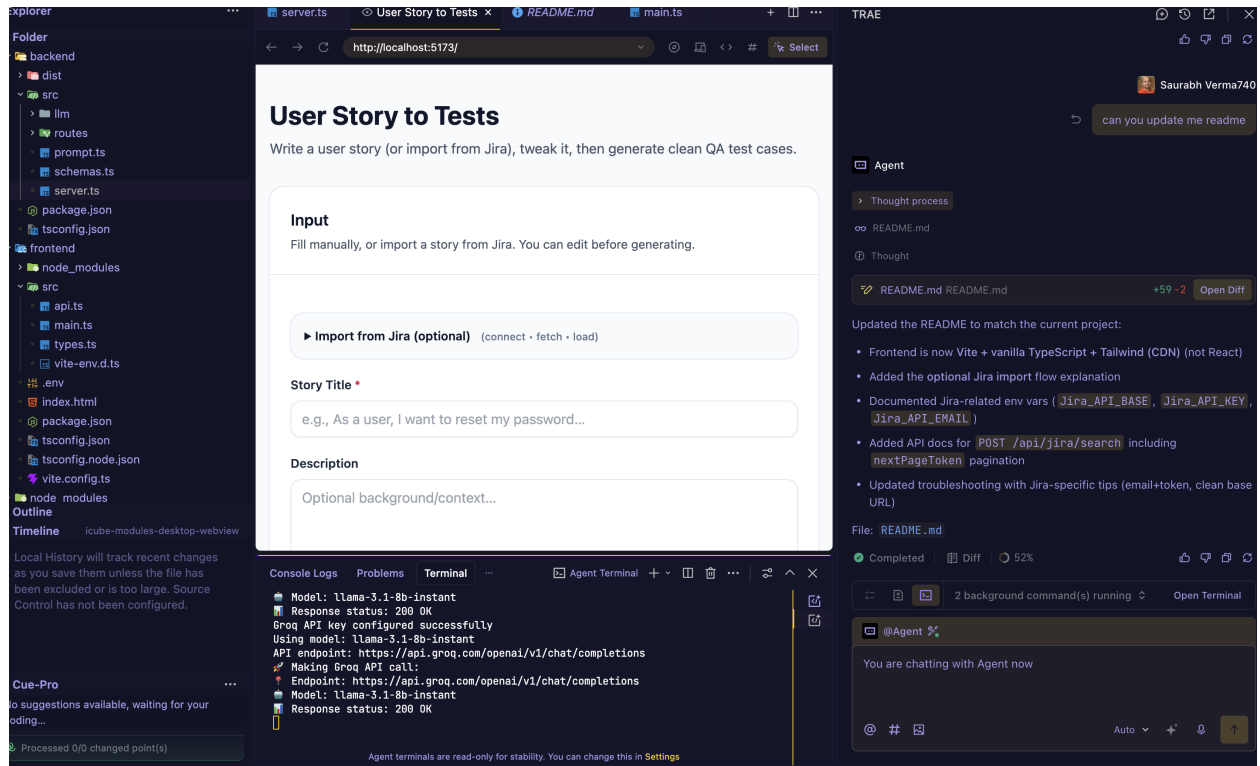

TEST DATA

Valid child details (e.g., John, 2, Autism, Sleep)

EXPECTED RESULT

App recommends starter routines based on needs

Application Home Screen

Jira Integration UI

User Story to Tests

Write a user story (or import from Jira), tweak it, then generate clean QA test cases

Input

Fill manually, or import a story from Jira. You can edit before generating.

▼ Import from Jira (optional) (connect • fetch • load)

KAN-3 — Guided Onboarding f✓

User Story Input Form

Saved JIRA config locally

Story Title *
Guided Onboarding for Parents

Description
experience that helps me create my child's first personalized routine quickly so that I can start using the app without confusion.
Acceptance Criteria

Acceptance Criteria *

- Parent enters child details (name, age, condition, goals).
- App recommends starter routines based on needs.
- Onboarding uses conversational/chat-style UI.
- Parent sees preview before publishing routine.
- User lands on ready-to-use home dashboard after setup.
