

Sarya QA Strategy Prompt & Reasoning Summary

Original Prompt Provided:

Context- Act as an expert test engineer working in Sarya Daily Wonder Book mobile app.
Design a Test Strategy Document for this mobile app.

Knowledge:

- [MANDATORY] Ask me question if you have doubt
- [STRICT] Once after answering first question go to next question
- [CRITICAL] Once after answering all the questions generate a test strategy document in excel

Updated Requirements Gathered During Discussion:

- Platform: Android and iOS
- Technology: React Native
- Scope: Complete mobile QA strategy
- Modules: All application modules
- Automation Tools: Detox and Maestro
- Release Flow: Developer → QA/Staging → TestFlight/Internal Testing → Production Smoke Test
- Output Format Changed: Excel → PDF
- Document Type: Simple Test Strategy Document

High-Level Reasoning Summary:

Instead of exposing private internal chain-of-thought reasoning, this section provides a concise summary of the approach used to create the final document.

1. The requirements were gathered progressively through structured questions.
2. The app context was identified as a React Native mobile application for neurodiverse children.
3. The testing strategy was expanded to include complete mobile QA coverage instead of only functional testing.
4. Accessibility testing was prioritized because the application targets autism and developmental support use cases.
5. Automation recommendations were aligned with React Native best practices using Detox and Maestro.
6. Release validation stages were included to support real-world mobile deployment workflows.
7. The final output was converted into a professional PDF document suitable for internal QA planning.

Final Deliverable Produced:

Sarya Mobile App Test Strategy PDF covering:

- Functional Testing
- Accessibility Testing
- Performance Testing
- Security Testing
- Compatibility Testing
- Regression Strategy
- Release Validation Flow
- Production Monitoring
