

Playwright Explained (ELI15) + Setup Guide

Playwright is a browser automation and testing framework created by Microsoft. It lets developers automate browsers like Chrome, Firefox, and Safari to test websites automatically.

What Playwright Does

- Opens websites automatically
- Clicks buttons and links
- Fills forms
- Checks if content appears correctly
- Runs automated browser tests

Why Developers Like It

- Fast execution
- Real browser testing
- Cross-browser support
- Automatic waiting for elements
- Screenshots and video recording

Install Node.js

Download Node.js from:
<https://nodejs.org>

Create a Project

```
mkdir my-playwright-app
cd my-playwright-app
npm init -y
```

Install Playwright

```
npm init playwright@latest
```

Run Tests

```
npx playwright test
```

Example Test

```
const { test, expect } = require('@playwright/test');
test('google has title', async ({ page }) => {
```

```
await page.goto('https://google.com');  
await expect(page).toHaveTitle(/Google/);  
});
```

Playwright vs Selenium

Playwright	Selenium
Modern	Older
Fast	Slower
Auto-waiting	Manual waits common
Easy setup	More configuration
